SUMMARY

Turns business and domain requirements into API contracts, system architecture, and delivered software, with 10+ years across airline distribution, telecom, and consumer loyalty systems. Owns and prioritises technical and feature backlogs from intake through delivery and adoption, sequencing cross-team dependencies in Agile and SAFe. Since 2025, runs discovery-to-launch on live AI-native products: user research, PRDs, model selection, guardrails, and cost-per-inference economics.

CORE SKILLS

Product: Discovery and user research · Requirements elicitation and management · PRDs, user stories, epics, acceptance criteria · Backlog ownership, refinement, and prioritisation · MVP scoping · Roadmap input and trade-off management · Success metrics and adoption measurement · 0-to-1 launches · Experimentation and A/B testing · UAT · Stakeholder facilitation · SAFe and PI Planning · Agile and Scrum · Jira · Confluence

Technical and Systems: REST API contract design · API-first design · 3-tier microservices on AWS · System and legacy integration · EDIFACT message flows · Partner integration patterns · Rules and configuration design · LLM API integration · Prompt and context design · Model selection · Agentic workflows · Guardrails (confidence thresholds, human review) · Anthropic SDK · Claude Code

Domain: Enterprise B2B SaaS · Airline distribution and reservations (PSS, GDS, New Distribution Capability (NDC)) · Telecom purchase journeys · Consumer loyalty and e-commerce · CRM and CPQ (Configure, Price, Quote) · Consumer AI

EXPERIENCE

AI Native Product Manager

Aug 2025 to Present

Independent · Bengaluru, India

- Owns the full cycle on three live AI-native products, from problem discovery and user research through PRDs, model selection, prompt and context design, guardrails, and cost-per-inference economics.
- Inaya (inaya.info), a care-coordination product for NRI families managing ageing parents in India: ran discovery, wrote the PRD, defined the care-score assessment framework, and engineered the assessment agent. Reached 277 completed assessments at 73% completion and 85 signups from 380 visits across roughly 15 days of organic traffic; placed 3rd at the Rethink Systems Product Hackathon.
- groupism (groupism.space), a group-travel planner that surfaces alignment on budget, dates, and preferences before booking: ran 10 user interviews, owned scope, and selected Gemini 2.5 Flash through a cost-per-inference framework after evaluating Claude, Gemini, and OpenAI on cost, latency, and quality, now monitored in production as a unit economic. A/B tested landing pages.
- cryptic-ui (cryptic-ui.vercel.app), a split-screen training tool for new airline agents learning the GDS cryptic booking flow, with bidirectional sync between a command-line interface and a visual UI: ran in-depth discovery interviews after finding existing training materials failed new-joiner needs.
- Stack: React, Next.js, TypeScript, Supabase, Postgres, Vercel, Anthropic SDK, Claude Code, and Gemini APIs.

Product Manager, Altea Seating

Jun 2023 to Aug 2025

Amadeus · Bengaluru, India

- Reduced seat-change queries from pilot airlines by 70% by defining and shipping a structured seat-change reason taxonomy that turned unstructured agent actions into governed operational feedback.
- Owned and prioritised the feature backlog and delivery for Altea Seating, the airline seating product used by 200+ carriers and carrying roughly EUR 4M in product ARR, sequencing cross-team dependencies through PI Planning, demos, and roadmap workshops within a SAFe release train.
- Configured airline-specific seating rules for 15 to 18 airlines across test and production, and coordinated the change releases.
- Ran configuration and test-cycle support for Southwest Airlines' move from open seating to assigned paid seating, applying changes across test and production.
- Diagnosed seat allocation, flight management, and seat map issues by tracing EDIFACT message flows and system logs, then translated root causes back to airline operators.

Technical Product Manager

May 2021 to Jun 2023

Infosys · Client: TalkTalk, UK

- Owned and prioritised the technical backlog and delivery for TalkTalk UK's consumer broadband purchase journey, the primary purchase journey on a site serving 1.9M monthly users.
- Rebuilt the purchase journey from a monolith to a 3-tier microservices architecture on AWS, defining REST API contracts and microservice interactions and integrating Openreach APIs, network systems, and CRM.
- Managed release planning, risks, and dependencies across upstream telecom systems, working in Agile and Scrum with Jira for backlog and sprint management.

Product Owner

Jan 2021 to May 2021

IBM · India

- Authored functional and non-functional requirements, user stories, workflow models, and business rules across the sales lifecycle for the Salesforce CPQ (Configure, Price, Quote) Central Programme, a 23-country rollout tied to a \$220M revenue target.

Technical Product Manager

Jul 2018 to Jan 2021

TCS · Client: Vodacom, South Africa · Johannesburg

- Launched VodaBucks 0-to-1, Vodacom South Africa's loyalty and e-commerce product built on a 26M-subscriber base, now one of the country's largest loyalty programmes at 8.9M registered users and 3.3 billion rands in points value transacted.
- Defined the engagement and retention model around MyVodacom app engagement and the earn-and-burn loop, increasing daily active users by 1 million.
- Owned and prioritised the technical backlog and designed the architecture, business rules, and partner integration patterns that cross-functional Vodacom teams and external partners built against.
- Defined the points and rewards rules: real-time accrual, rewards catalogue configuration, redemption logic, the multi-currency points framework, and partner settlement and reconciliation.
- Coordinated delivery across cross-functional Vodacom teams and external vendors without direct authority, spanning the mobile app, recommendations engine, loyalty engine, e-commerce catalogue, and middleware.

Process Designer

Jul 2015 to Jul 2018

TCS · Client: Openreach, UK · Chennai, India

- Designed Lead-to-Cash (L2C) process flows and broadband fulfilment processes for fibre-to-the-premises (FTTP) and fibre-to-the-cabinet (FTTC) provisioning on national fibre rollouts, coordinating distributed delivery teams across geographies.

EDUCATION AND CERTIFICATIONS

AI Product Management Programme, Cohort 7

2026

Rethink Systems, Bangalore

Post-Graduation Diploma in Management (Marketing)

2013 to 2015

SDM Institute for Management Development (SDMIMD), Mysore

Bachelor of Engineering, Computer Science

2007 to 2011

Chhattisgarh Swami Vivekanand Technical University (CSVТУ)

AWARDS AND RECOGNITION

- Vodacom CEO Award, 2020, for innovation and cross-functional leadership on VodaBucks (South Africa).
- Vodacom Best Individual Award, CBU IT Demand and Delivery, 2020.
- Best Designer Award, Openreach (UK).
- 3rd place, Rethink Systems Product Hackathon (Inaya).
